Mail Client Configuration for "news@sskrypto.com".

When you access an email account through a desktop email application such as "MacOS® Mail.app® for Lion (10.7+)", the email application will require specific information about your email account. You can use the auto-configure options below to attempt to automatically configure your email application. If the available options are not compatible with your application, use the **Manual Settings** information.

Secure SSL/TLS Settings (Recommended)

Username: news@sskrypto.com

Password: Use the email account's password.

Incoming Server: gator3219.hostgator.com
IMAP Port: 993
POP3 Port: 995

Outgoing Server: gator3219.hostgator.com
SMTP Port: 465

Authentication is required for IMAP, POP3, and SMTP.

Non-SSL Settings (This is **NOT** recommended.)

Username: news@sskrypto.com

Password: Use the email account's password.

Incoming Server: mail.sskrypto.com
IMAP Port: 143
POP3 Port: 110

Outgoing Server: mail.sskrypto.com
SMTP Port: 25

Authentication is required for IMAP, POP3, and SMTP.

Notes:

- IMAP email access coordinates between the server and your mail application. Messages that you have read, deleted, or replied to will show up as such, both on the server and in the mail application.
- POP3 does not coordinate with the server. Messages that the mail application marks as read, deleted, or replied to will not show up as such on the server. This means that future mail downloads with POP3 will show all messages as unread.
- The system uses SMTP to send outgoing mail.
- We recommend that you use POP3 over SSL/TLS or IMAP over SSL/TLS because they provide increased security for your interactions with the remote mail server.

Check email from other accounts with Gmail

If you have multiple email accounts, you can check them all in Gmail. Gmail's Mail Fetcher feature first imports all your old messages to Gmail and then continues to bring in new messages sent to your other account. You can add up to 5 accounts, including Gmail and other email providers.

If you only want to get new emails brought into Gmail, try auto-forwarding your mail instead.

Start importing emails

Choose the type of account you're importing *from*:

A different Gmail or Google Apps address 

A different email provider 

If you're importing from another email provider, your other email provider has to offer POP3 access. Go ahead and try the steps below, but if you get an error you may want to visit your other email provider's help center to see if they support POP3. You can also try other ways to move emails to Gmail.

1. Open your Gmail account.
2. At the top right, click the gear .
3. Select **Settings**.
4. Select the **Accounts and Import** tab.
5. In the "Check mail from other accounts (using POP3)" section, click **Add a POP3 mail account you own**.
6. Enter the full email address of the other account, then click **Next Step**.
7. Enter your password.
8. Now you have a few options to choose from. Here's our recommended settings:
 - **Leave a copy of retrieved messages on the server** - Check the box. Otherwise the emails in your other account will be deleted and you'll only be able to access them in Gmail. [Learn more](#).
 - **Always use a secure connection (SSL) when retrieving mail** - Keep checked. For some accounts, you may need to uncheck this option. [Learn more](#).
 - **Label incoming messages** - Check the box if you'd like to easily see which emails in your inbox came from this account.
 - **Archive incoming messages** - Don't check. Only check if you don't want to see new messages from the other account in your inbox.

9. Click **Add Account**. If you get an error message while getting set up, click the **Show error details** link to find out more about what's not working.
 - If you get a message saying that POP is disabled, go to the settings page of your other email account and look for a way to enable POP.
 - If you get a message saying that POP is unavailable, your email provider may not support POP. You can also try other ways to move emails to Gmail.
 - For other errors, visit our [Problems with Mail Fetcher](#) troubleshooter.
10. Once your account has been added successfully, you'll be asked if you want to be able to send mail as this address. This lets you compose messages in Gmail, but have them appear to be sent from your other email account.

Gmail will check your other account for new emails periodically. You can see when the other account was last checked from the "Accounts and Import" tab.

Stop importing emails

If you don't want to get emails from your other account in Gmail anymore:

1. Open the Gmail account that you've been importing mail *to*.
2. At the top right, click the gear .
3. Select **Settings**.
4. Select the **Accounts and Import** tab.
5. Find the "Check mail from other accounts (using POP3)" section.
6. Click **delete** next to the account you want to stop getting emails from.

Any emails that you previously received will stay in Gmail until you delete them.

Still receiving new emails? A few messages may still come in after turning off Mail Fetcher. But if you're still getting new messages after a few hours, your other account might be forwarding your emails instead. Check your other account to see if automatic forwarding is set up and follow the other email provider's instructions on how to turn it off.

Tip: You can bring your contacts to Gmail too, by importing contacts.
